Attached are 3145.5 acres of proposed application sites which should receive 50% of the agronomic nitrogen rate frequently or 100% of the agronomic nitrogen rate infrequently (1 in 3 years) for cropland fields, and permanent cover fields should receive 50% or 70% of the agronomic nitrogen rate annually. There are no new biosolids sources being requested in this modification. A complete list of all proposed sources is listed in the introduction.

If you have any questions regarding this modification, please feel free to contact me at your convenience.
